

Dan Baroody

Lead UX & UI Product Designer

Elmira, New York dabaroody@gmail.com linkedin.com/in/danbaroody www.dodill.com

I am the person you call when something is complicated, behind, or falling apart. For nearly two decades I have managed website content, built and run email campaigns, and turned analytics into decisions for the people who need them. I always strive to leave things in a better place than I found them.

Experience

Lead UX & UI Product Designer

Salient, Big Flats, New York, Jul 2014 – Present

- As Salient's first and only designer, own end-to-end product design for its enterprise analytics platform across web, mobile and desktop, leading major applications from concept and research through implementation, release and iteration.
- Design dashboards, data visualization, data tables and reporting interfaces for analytics-focused, data-intensive applications serving healthcare, beverage and higher education clients, including complex New York State Medicaid and Medicare data.
- Set the design direction and product-wide standards: information architecture, interaction models, end-to-end user flows and visual standards shared by every client-facing application.
- Solve ambiguous, complex problems in data-heavy workflows through systems thinking, rapid prototyping and iterative testing, turning user research, customer feedback and business goals into clear design recommendations.
- Represent customer needs in product discussions with product, business and development teams, and build alignment across teams and stakeholders on what to build and why.
- Translate complex data concepts into clear, accessible language and visuals for non-technical audiences.
- Partner with engineers through implementation in Agile sprints, guiding builds and resolving design questions until features ship the way they were designed.
- Built the product design system from the ground up in Figma and Storybook, and continue to scale it: reusable patterns, components and a documented pattern guide that keep new screens consistent and accessible across platforms.
- Design for accessibility and inclusion, including full keyboard support, screen reader labels, high-contrast states, reduced-motion support and larger touch targets.
- Apply user-centered methods throughout: user personas, journey maps, usability evaluation, user testing and research synthesis, with findings fed back into product decisions.
- Wireframe and prototype in Balsamiq, Figma and working HTML and CSS, and use AI tools and LLMs to speed up exploration and prototyping.
- Work with the marketing team on the presentation and organization of the company website after helping redesign and rebuild it, and contribute to web content, digital advertising, and email campaigns, including helping craft A/B tests on their campaign content.
- Serve as the in-house technical guide for email content, advising the development team on responsive template structure and build requirements so emails render correctly across inboxes.

Director of Digital Content and Design

Elmira College, Elmira, New York, Feb 2008 – Jul 2014

- Led the full redesign and launch of the college website, restructuring the information architecture around visitor goals so prospective students and families reached what they needed in fewer clicks, with the institution's priorities more visible.
- Interviewed prospective students one on one and synthesized what drove their decisions into recruitment content and site priorities.
- Managed and mentored a multidisciplinary team of creative and technical staff, providing direction, feedback and day-to-day guidance.

Education

Bachelor of Fine Arts, Graphic Design

SUNY Oswego, 2002 – 2005

Associate of Arts, Art Studies

Corning Community College, 1999 – 2002

Skills

Product Design

End-to-end product design
Interaction models
Information architecture
User flows
Systems thinking
Data visualization
Dashboards and reporting
Enterprise and data-heavy UI
Web, mobile and desktop

Design Systems

Reusable patterns
Component libraries
Pattern documentation

Accessibility

Keyboard and screen reader
Contrast and reduced motion
Inclusive design

Research

User personas
Journey maps
Usability evaluation
User testing
User interviews
Research synthesis

Prototyping

Wireframing
Figma
Balsamiq
HTML & CSS prototypes
Adobe XD
Storybook

Data

Power BI
Tableau
Metabase

- Originated every one of the college's social media channels, launching its first Facebook, Twitter, YouTube and Instagram presences, and developed new messaging that grew reach with the community, lapsed alumni and new students, increasing donations and engagement across every audience.
- Published, refreshed, and maintained web content for departments across the institution in the college's content management system, and helped staff get comfortable working in it.
- Built the email marketing templates and oversaw recruitment, nurture, and fundraising campaigns for audiences from prospective students to alumni.
- Gathered Google Analytics data on website visitors and email campaign performance, reporting it to stakeholders across the college to guide recruitment.
- Wrote, edited and designed print and digital publications, including viewbooks, brochures, newsletters and event materials.
- Worked directly with executives at every level to align messaging across departments, and prepared press releases, public statements and crisis communications.

Creative Director

inCommand Technologies, Corning, New York, Aug 2006 – Mar 2008

- Designed and built client websites end to end using a proprietary CMS, HTML and CSS, managing delivery for multiple clients at once.
- Created email marketing templates, campaign content and digital advertising for clients including Pyrex and World Kitchen.

Graphic Designer

Elmira Star-Gazette, Elmira, New York, Sep 2005 – Aug 2006

- Designed and produced print advertising in a high-volume, deadline-driven newsroom, managing 75+ ads and supporting assets each daily production cycle.
- Led the department's transition from film-based to fully digital production.

Digital Marketing

Google Analytics
A/B testing
Email campaigns
Email template build
Website content management
Content strategy
Social media platforms
Digital advertising

Content

Copywriting and editing
Press materials
Newsletters
Photography and video

AI & Tools

Claude & ChatGPT
AI-assisted design
Adobe Creative Suite
Canva
Microsoft Office Suite
Google Workspace

Collaboration

Cross-functional partnership
Stakeholder alignment
Engineering handoff
Agile sprints
Mentoring and feedback

Selected work

Each one links to its case study, with screenshots and interactive prototypes.

Range Summary window [Salient](#)

Problem: Comparing date ranges on a chart opened a separate window for every range.

Solution: One window that holds every range side by side, highlights each range on the chart and calculates the differences between them, with full keyboard and screen reader support.

Dashboard directory [Salient](#)

Problem: Nobody could find a dashboard unless they knew who saved it and where.

Solution: A search-first directory with filters, Recent and Favorites, grid and list views and adjustable density, prototyped in clickable HTML for team feedback.

Configure dialog [Salient](#)

Problem: Every setup dialog worked a little differently, so people had to relearn each one.

Solution: One dialog with a shared available-and-selected pattern for group by, measures, date ranges, filters and options.

College website redesign [Elmira College](#)

Problem: Prospective students and families could not quickly find how to visit, apply or pay.

Solution: Navigation grouped by visitor goals, calls to action on every page, and the college's priorities surfaced on the home page.

Social media from zero [Elmira College](#)

Problem: The college had no presence on social media.

Solution: Launched every channel with new messaging that reached the community, lapsed alumni and new students, increasing donations and engagement.

Fieldline website concept [Personal project](#)

Problem: One company website has to speak to six different industries.

Solution: A 15-page marketing site hand-built in HTML, CSS and JavaScript, with shared templates so every page stays consistent.

dodill creative tools [Personal project](#)

Problem: Artists need small, focused help without the tool doing the creative work.

Solution: Creative Spark, an Image Grid Tool and a Color Palette Maker, all running in the browser.
